Fire Reports Release Notes - v1.46 - October 3rd, 2019

Fire Reports v1.46	October 3rd, 2019

New in This Release

New Feature Highlight:

The following new features are the most impactful for users, so we describe them here in greater detail:

New Features

The following features have been added in this release:

Key	Summary	Release Notes
FIRE-596	Increase Size of Add Contact Modal	We increased the size of the "Add Contact" and "Edit Contact" Screen in the Occupancy Module.
FIRE-594	LOSAP - Allow Punctuation and Symbols in the "Event Name" Field	Added the ability to include punctuation and special characters in the LOSAP Event Name field.
FIRE-581	Inspection Signature Workflow Improvements	We made several improvements to the workflow when completing inspections. The button ordering was changed to be more intuitive and the Clear Signature functionality will also clear both the "canvas" and also the printed signature. We also included a check to verify that a signature was included prior to completing the inspection.
FIRE-539	Property - Share Contacts	Added the ability to designate Occupancy Contacts as Property Contacts. When Occupancies are linked together via the Property functionality, their contacts will also be automatically shared when the contact is designated as a property contact.
FIRE-524	Rework Sign Offs Tab	We made several changes to the Sign Offs tab. Previously, this tab was somewhat confusing and signatures were prompted for the person who was logged in and not necessarily the person who was listed as the member making the report or the person listed as the officer in charge.

Improved in This Release

The following issues have been addressed and resolved in this release:

Key	Summary	Release Notes
FIRE-601	Fire Reports White Screen	Fixed an issue where sometimes clicking on Fire Reports from the main page would result in a white screen. This is occasionally caused by a cookie issue or a security privilege issue. Now, instead of a blank white screen, users will see an error message.
FIRE-599	Incident Type 160 - Fire or Wildland Fire Module Required	Fixed an issue with incident type 160. The NFIRS Standard dictates that either the fire module OR the wildland fire module MUST be used for this incident type. Previously, we were not enforcing this requirement.
FIRE-595	Remove Print Preview Options for Incomplete Incidents	The Print Preview options were erroneously showing for incomplete incidents. These options will now be hidden until an incident is in a locked (completed) state.

Known Issues

The following issues have already been identified and will be addressed in a future release:
