emsCharts Release Notes
for Tablet v1.4.9

Bug Reporting

For issues **not** mentioned in the *"Known Issues Section"*, please file a bug report through an emsCharts Support Ticket
([Click Here To Open Support Ticket](#)) To get more information about emsCharts Tablet, please download our Tablet Quick Start Guide ([Click Here For Production Documentation](#))

Upcoming Enhancements

Our team is currently working to deliver a method of scanning linear (UPC) or QV (2d) barcodes to populate chart data points. You should see this functionality in the upcoming builds barring any blocker/critical items that fail QA testing.

We are expecting to move our application to the Google Play Store and iTunes App Store over the next several weeks, watch out for important announcements when this occurs.

Important Build Information

Software Version 1.4.9 is the latest update that will need to be applied, you do not need to uninstall any previous versions prior to download and installing this build* The most recent release contains significant updates and bug fixes. If you are experiencing any difficulties with updating your device, please contact our Support Department for assistance.

*Using emsCharts Tablet v146 or high, this build does not require uninstall. All other builds require complete uninstall
