emsCharts Release Notes for Tablet v1.4.5

Bug Reporting

For issues *not* mentioned in the Known Issues section, please file a bug report through an emsCharts Support Ticket

([Click Here To Open Support Ticket](#)) To get more information about emsCharts Tablet, please download our Tablet Quick Start Guide ([Click Here For Production Documentation](#))

Upcoming Enhancements

Our team is currently working to deliver a method to scan linear (UPC) and QV (2d) barcodes to populate chart data points. You should see this functionality in the upcoming build scheduled for January 25/26 barring any blocker/critical items that fail QA testing. In addition, you will start seeing a change to data points with drop down boxes. Data points with a higher number of available options will have the ability to search for values. – more information to follow in the next several weeks.

Fixed in This Release

1. Custom Forms - Hide permanently forms no longer appear
2. Procedure drop down fixes – Sorting drop down data is now A-Z for many data points
3. CC/HPI Section - Button Alignment
4. Social Media link fixes
5. Removed "DOCS" – not being used at this time, this was a carryover from emsCharts Mobile
6. Removed "COMING SOON" from support
7. Patient Information – County is now populated when zip code is searched
8. Employment Details – United States is now defaulted to the top of drop down box

Known Issues

1. Crew level certification missing from chart after upload

   Workaround: Manually select crew level certification on emsCharts Web

2. Custom Vital Signs labels appear incorrectly on web

   Workaround: None

3. Patient race missing from chart after upload

   Workaround: Manually selecting race on emsCharts Web

4. Factors affecting care are missing from chart after upload if all factors are set to NONE

   Workaround: Manually selecting factors on emsCharts Web

5. Unable to Sign data field allows more characters than field can support, when exceeding 100 characters' upload fails
